Homework #4
Due May 8 2026 11:00 PM

1. **<AXI Wrapper Implementation >** Design and implement an AXI wrapper for the matrix multiplication accelerator developed in homework #2. In addition, you have to run your design in Zedboard. You have to write a C program which will be run in ARM CPU of Zedboard to test the functionality of your design.

In addition to submit your code, you also have to write a report to describe how you design your wrapper. The detailed memory mapped setting of your module has to be provided, too.

2. **<Final Project >** Plan what topic you are going to do for your final project.

Provide a short description about what you are going to do for your final project.
