Homework #5
Due Jun 05 2025

<Driver Implementation> Run the circuits you developed in Homework #4 on the Zedboard under the Linux operating system. You have to

1. Write a device driver for your circuits to interface with Linux.
2. Write an application program to test your driver.

If your circuit does not run successfully on the Zedboard, you may submit:

- An ideal driver program (simulating proper functionality) and
- The associated application program.

Submitting these will allow you to receive partial credit.

You can demonstrate your code run on the Zedboard either

- To the TA before the deadline, or
- During the class on June 05.
